 Packed 4 cans per case

?STICK-EM® Glue Traps should be placed on the floor against walls as rodents tend to run along walls. They normally sense no danger from the glue traps, will step right in and entrap themselves. The pre-baited versions of STICK-EM® Glue Traps provide an added lure.

The traps can also be easily placed on ledges, under appliances, behind machinery and countless other places rodents may feed or travel. Rat size traps also can be secured to beams, pipes and in suspended ceilings by pushing wires through the trays' indented holes and twisting the wires together.

For insects, place STICK-EM® Glue Traps in areas where insects are normally found, such as in cabinets, pantries, under sinks and refrigerators. Depending on the size, a single trap can capture dozens or even hundreds of insects.

## Put these features to work for you:
